SENIOR PLATFORM ENGINEER | AZURE | ENDPOINT | AUTOMATION | AI PLATFORM ENGINEERING

PLATFORM PROFILE

Senior platform engineer with 15+ years of enterprise IT experience designing, automating and operating Windows and Azure-connected enterprise platforms. Deep experience across ConfigMgr, Intune, Azure, PowerShell, Microsoft Graph, Log Analytics, identity and security controls, observability, lifecycle automation and production governance. Now applying this platform-engineering foundation to Microsoft Foundry, AI agents, Python/REST APIs and secure enterprise AI integration, with a focus on connecting AI to real enterprise systems, telemetry and automation.

ARCHITECTURE & ENGINEERING EXPERTISE

Azure Platform Engineering	PowerShell Automation	Microsoft Graph / REST APIs	Microsoft Foundry / AI Agents
ConfigMgr / MECM / OSD	Intune / Autopilot	Azure Log Analytics / Workbooks	Identity / Conditional Access
Endpoint Platform Architecture	Platform Standards & Governance	Driver / BIOS Governance	Change & Release Engineering

AI PLATFORM ENGINEERING

- Developing Microsoft Foundry agent workflows, Python/REST API integration, RAG/MCP concepts and secure Azure identity/RBAC patterns for enterprise AI use cases.
- Building an AI Endpoint Troubleshooting Assistant that connects AI agents with Microsoft Graph/Intune data, endpoint telemetry and enterprise automation workflows.

PROFESSIONAL EXPERIENCE

Senior Endpoint Platform Engineer

2022 - Present

Fortune 500 Enterprise Environment | Remote / Enterprise

- Own architecture and engineering for enterprise Windows provisioning and endpoint platform services, combining automation, observability, structured telemetry and lifecycle governance across a large-scale ConfigMgr environment.
- Define reusable platform standards, automation patterns and operational controls that make provisioning workflows consistent, measurable and easier to extend through API-driven and data-driven engineering.
- Partner with endpoint, infrastructure and security teams to assess production risk, troubleshoot complex failures and execute controlled enterprise changes, using telemetry, log analysis and AI-assisted engineering workflows to accelerate investigation while retaining engineer validation and rollback controls.
- Designed and implemented OSDMonitor.exe, a phase-aware observability and self-healing framework that converts task-sequence activity into real-time telemetry, recovery actions and structured troubleshooting signals.
- Engineered event-driven recovery using scheduled-task automation and process-termination auditing, applying rule-based remediation to prevent provisioning failures and improve deployment resilience.
- Built Azure Log Analytics ingestion and Azure Workbooks for platform health, deployment telemetry, failure trends and operational decision-making, creating a centralized analytics foundation for automation and AI-assisted troubleshooting while improving provisioning reliability by approximately 25-30%.
- Architected hardware lifecycle governance for driver version control, BIOS auditing, compliance modeling and repeatable release management, turning hardware state into standardized data for automated decisions.
- Automated HP driver acquisition with PowerShell, dynamic HTML parsing and SoftPaq resolution, using programmatic discovery and data extraction to reduce manual dependency and avoid HP CMSL requirements.
- Standardized modular task-sequence design and hardware abstraction patterns to reduce drift, improve reuse and simplify integration with automated platform services.

Impact: Evolved operating-system deployment from reactive troubleshooting into a measurable, automation-driven endpoint platform with the telemetry and governance needed for advanced analytics.

SCCM / Intune Administrator

2019 - 2022

Gulfstream Aerospace Corporation | Savannah, GA

- Operated hybrid endpoint platforms across ConfigMgr and Intune co-management, using client health, workload state and platform telemetry to support upgrades and service reliability.
- Engineered zero-day patch automation and repeatable deployment workflows, translating vulnerability-response requirements into policy-driven remediation for critical threats.
- Governed Win32 application packaging, testing, deployment and lifecycle changes through repeatable ConfigMgr task-sequence and software-distribution workflows.
- Configured Azure AD Connect synchronization, Conditional Access, data loss prevention and identity protection, building identity and access controls that support secure cloud and automation workflows.
- Implemented policy-driven Windows feature-update controls to prevent unmanaged upgrades and preserve application and hardware compatibility.

Impact: Strengthened governance and automation across a hybrid ConfigMgr/Intune platform while expanding cloud identity and security integration.

Senior Systems Engineer

2017 - 2018

Publix Corporation | Lakeland, FL

- Automated enterprise administration and endpoint-management workflows with PowerShell and used Azure AD sign-in and provisioning logs for data-driven identity troubleshooting.
- Managed Windows, iOS and Android endpoints through Intune and SOTI while supporting Azure virtual-machine operations and cloud-connected endpoint services.
- Provided enterprise engineering guidance across hardware, software and user-computing services, emphasizing repeatable standards and automation across corporate and retail environments.

Senior Deskside Analyst

2014 - 2017

Gulfstream Aerospace Corporation | Savannah, GA

- Administered SCCM application deployment, patching and client troubleshooting using CCM logs and SCCM Client Center, applying log-driven root-cause analysis to endpoint incidents.
- Packaged, tested and distributed applications under DISA STIG and Department of Defense standards, reinforcing secure and repeatable software-delivery practices.

IT Specialist

2012 - 2014

Effingham County | Springfield, GA

- Designed the SCCM strategy for a 500+ user Windows 7 migration, combining automated deployment, user-state preservation and risk controls for a repeatable rollout.
- Automated Active Directory and Exchange administration with PowerShell and delivered applications through SCCM, Group Policy and scripting, establishing a strong foundation in scripted infrastructure automation.
- Supported DNS, Active Directory replication topology and enterprise voice systems, building core identity, directory and network infrastructure experience.

CERTIFICATIONS & EDUCATION

Microsoft 365 Certified: Endpoint Administrator Associate (MD-102)
Certified Nextthink Associate
Microsoft Certified: Azure Solutions Architect Expert (AZ-305)
Microsoft Certified: Azure Administrator Associate (AZ-104)
Microsoft Certified: Azure Fundamentals (AZ-900)

Armstrong Atlantic State University
Information Technology coursework - 117 credit hours
Savannah, GA
